

### Backup (Alt + B)

Backup Module enables user to get backup of data from the application.

On clicking the option or on pressing the shortcut (Alt + B), a popup will

be displayed to user as shown below:

Now user must select a valid destination path by clicking on

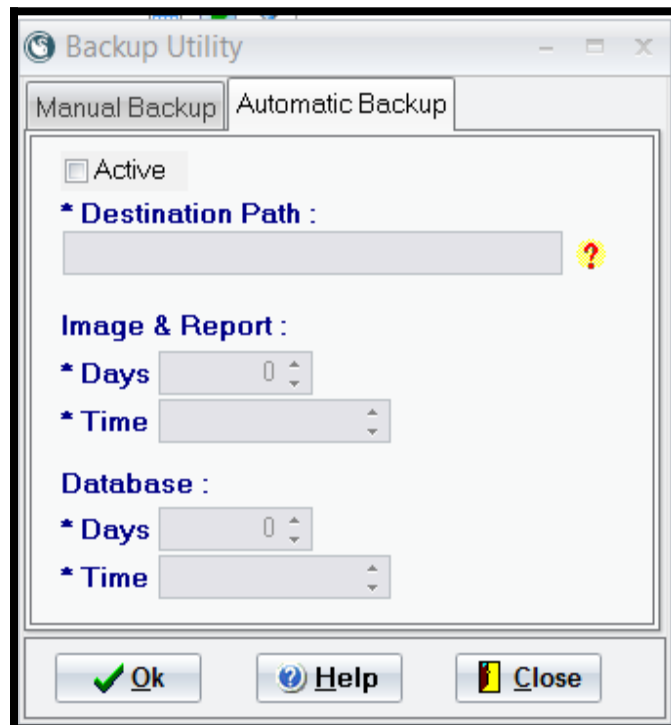

After selecting the path user will have to click on “start” to store the backup data into the selected path.

Once the backup is completed, application will show message “Backup Completed Successfully”.

This is the intellectual property of Cygnets Infotech Pvt. Ltd. and unauthorized use of this document shall not be entertained.

Automatic backup functionality is also available in this backup module.

User must select active check button to activate this functionality.

After that user must provide details such as destination path, days and time details for Images, report & database, respectively.

Now for restoring the data in FACE proceed with following steps:

User has to open the FACE folder (C:\Program Files (x86)\FACE)

In that user must select “Restore Face Backup” present in the folder and then right click on it and “Run as Administrator”.

In restore folder select saved face backup file which needs to be restored. In that select “SystemData.bak”.

Check required database option and click on “Start”.

Once the process is done “Restore process done successfully” message will appear.  
After that Log in to FACE application.

Close (Alt + S)

On clicking the Close (Alt + S) button, Backup tab will get closed.

Help (Alt + H)

On clicking the Help (Alt + H) button, user will be redirected to help manual of Backup Tab.
